Title: A Data Analysis of a Sample of Employees at a Company

Summary: This data analysis covers the performance of employees at a company over a period of six months. The key points are highlighted and recounted in summary form. The statistics table provides detailed information on each employee's salary, job title, department, and number of completed projects. The overall trends and patterns are discussed with recommendations for improvement.

## Key Points:

- The analysis showed that the average annual salary for all employees was \$105,000, with the highest salary being in the Marketing Department at \$128,000.
- Of the six departments examined, Engineering and Design had the highest number of completed projects over the period, with 78 and 64 respectively.
- The company's overall project completion rate was 75%, with Engineers accounting for most completions (38%). Designers contributed to completion rates as well (20%).
- The salaries and project completion rates of each employee were analyzed, along with suggestions for improvement.

## Statistics Table:

Department		Number of Completed Projects		Project Completion Rate	
Average Salary					
Engineering	Marketing	78	95%		
\$128,000					
Engineering	Design	64	38%	\$130,000	
HR	Personnel Services	7	25%	\$95,000	
Marketing	Marketing	94	76%	\$130,000	
Design	Design	38	38%	\$130,000	

## Recommendations:

- Encourage collaboration between departments to ensure maximum project completion rates.
- Increase training and support for employees in order to improve completion rates.
- Implement a performance evaluation system to identify areas for improvement in employee performance.
- Review hiring practices to select employees with relevant experience and expertise.
